

IS EARLY LIFE ADVERSITY RELATED TO ADDICTIVE BEHAVIOURS?

Are you:

- Aged 16-34?
- In Australia?
- With internet access?

You may be eligible

Earn \$40 in a one-time online study.*

Your contribution matters. The confidential Adverse Childhood Experiences, Attachment, Affect, and Addiction Study (ACE3A) investigates how early life experiences influence our later behaviours, such as eating habits and alcohol consumption. Understanding these relationships can help with identification, prevention, and treatment of problems that affect millions of Australians.

For inquiries email ace3a-study@unimelb.edu.au

*Estimated participation time 90 mins
